

Scientific and Ethical Issues in Covid-19 Clinical Trials

Dr Arun Bhatt MD FICP FICR (UK)
Consultant –
Clinical Research & Development

GCP Challenges : Covid-19

- Benefits of investigational / repurposed therapy unknown/unsupported vs. Risks unknown / uncertain
- Interest of science / society overriding interest of individual participant
- Available non-clinical & clinical information on therapy inadequate
- Clinical trials – challenge of science and ethics
- Sponsor and investigator - training and experience in pandemic /trials

Bias in COVID-19 RCTs (BMJ 31 Jul20)

- Randomisation process
- Departures from the intended intervention
- Missing outcome data
- Measurement of the outcome
- Selection of the reported results
- 21 of 23 RCTs high or high risk of bias in the domains of randomisation or deviation from the intended interventions.

Disease Severity : WHO

Non-severe

Severe

Critical

Absence of signs
of severe or
critical disease

SpO₂ < 90%
on room air

Respiratory rate
> 30 in adults

Raised respiratory
rate in children ⁱ

Signs of severe
respiratory distress

Requires life
sustaining treatment

Acute respiratory
distress syndrome

Sepsis

Septic shock

Corticosteroids : WHO Recommendation (BMJ 4 Sep20)

	Events per 1000 people			Evidence quality		
Mortality with critical illness	415	87 fewer	328	★★★★	Moderate	More ▼
Mortality with severe illness	334	67 fewer	267	★★★★	Moderate	More ▼
Gastrointestinal bleeding	48	No important difference	51	★★★★	Low	More ▼
Superinfections	186	No important difference	188	★★★★	Low	More ▼
Hyperglycaemia	286	46 fewer	332	★★★★	Moderate	More ▼
Neuromuscular weakness	69	No important difference	75	★★★★	Low	More ▼
Neuropsychiatric effects	35	No important difference	28	★★★★	Low	More ▼

Critically ill

Severely ill

Clinical Trials on COVID-19- Examples

Protocol	Remdesivir	Favipiravir	Tocilizumab	Itolizumab
Patients	<ul style="list-style-type: none"> • 1063 • Severe 89% • Non-severe 11% 	<ul style="list-style-type: none"> • 150 • Mild to moderate 	<ul style="list-style-type: none"> • 243 • Severe 	<ul style="list-style-type: none"> • 30 Moderate to severe
Design RCT	Double blind Placebo	Open Standard care	Double blind Placebo	Open Standard care
Efficacy end points	<ul style="list-style-type: none"> • Shorter time to recovery • No effect on mortality 	<ul style="list-style-type: none"> • Viral clearance faster • Clinical cure higher % 	<ul style="list-style-type: none"> • Not effective for preventing intubation or death 	<ul style="list-style-type: none"> • Significant Mortality benefit
Published	• Yes	• No	• Yes	• No

Covid-19 Trials : Participants

- **Trial Patients**

- Vulnerability vs Voluntariness
- Recruitment
- Informed Consent process
 - Timing of consent
 - Time for explanation
 - Time for participant
 - Communication
 - Non-availability of LAR
 - Documentation – AV recording

- **Vaccine Volunteers**

- Vulnerability vs Voluntariness
- Recruitment
 - Hospital staff
 - Media / social media advertisement
- Concerns about visiting hospitals
- Informed Consent process

RECOVERY Trial Informed Consent Process (Oxford)

- For patients **who lacked capacity to consent** due to severe disease requiring ventilation, and for **whom an LAR was not available**, randomization could be done with consent provided by a treating physician, who was independent of the investigator conducting the clinical trial, and who would act as the legally designated representative.
- Consent would be obtained from the patient's LAR or directly from the patient if they recover promptly at the earliest opportunity.

Ethical Responsibilities For Vulnerable Participants (ICMR 2017 & 2020)

Sponsor	<ul style="list-style-type: none">• Justification for inclusion• Provisions for protecting safety• Enable monitoring and quality assurance
Investigator	<ul style="list-style-type: none">• Recognition of vulnerability• Ensure additional safeguards for protection• Empower the participant to make decisions• Respect dissent from the participant• Avoid exploitation/retaliation/reward/credits• Well-documented informed consent process
Ethics Committee	<ul style="list-style-type: none">• Review of justification for inclusion• Careful assessment risk- benefit, and risk minimization• More frequent review and monitoring
